You have a recent observation of *Solea solea* on a specified location

Your notes are as follows:

Enter for dataset **HAB**

Species name: *Solea solea*

Occurrence date: May 10th 2018

Location: Bay of Biscay, coordinate uncertainty is 20 meters

F

- Temperature: 20 Degrees Celsius
- ObservedIndividualCount: 2
- Abundance of biological entity specified elsewhere per unit volume of the water body: 10 (per cubic meter)

(note: we know the units and values make no sense)

You've made a mistake: edit the value of the observedIndividualCount to 4

D C

- associatedTaxa: "*Cymothoa exigua*"
- samplingProtocol: "bottom trawl"
- materialSampleID: "MG935397"

You've made a mistake: Remove the associatedTaxa
