

You need to make some changes to previously entered data due to newly acquired information.

You're looking for the **Abra Alba** record in the NPPSD dataset. You want to change the occurrence location coordinates to longitude 20.210103, latitude 56.897445. There should be no observation data present, but you want to add two specific Darwin core fields namely: dataGeneralizations with as value 5.12 and type with as value "marine"
